## **DETAILED ACTION**

This Office action is responsive to communication received 5/17/2004 – application papers filed; 11/24/2004 – Response to Notice to File Missing Parts and Drawings.

Claims 1-10 are pending.

Following is an action on the MERITS:

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Schultz.

Figure 2 clearly depicts the shaft in Schultz as having a golf club with a shaft having a hollow interior and further including a tip end and a butt end. The club head (12) includes a hosel or shank (34). At least one member (48) serves as a shaft ring secured within the hollow interior. Note screw (44) placed within the hollow interior of the shaft through a bore in the shaft ring 948) and connected to the hosel in a threaded fashion (Figure 4).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/709,600

Art Unit: 3711

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Cocke.

The patent to Cocke shows every feature claimed with the exception of the exact claimed dimensions for the crown distance and the placement of the metal shaft ring. It is clear that these dimensions would have depended upon the overall size of the head, the amount of hosel material designed into the head and the shape of the shaft cross—section at the hosel connection point. Certain governing bodies such as the USGA provide guidelines on the length of a hosel and the type of connections allowed between the head and the shaft. These guidelines in combination with the design criteria provided to the skilled artisan would have greatly influenced the size of the hosel and the exact location of the shaft ring. Moreover, these claimed dimensions are not deemed critical, as these dimensions have simply been disclosed as preferred. Additionally, it is noted that the threaded metal screw (5), while being shown with threads attached to a metal shaft ring or ferrule (11) is in essence also attached to the hosel indirectly through threaded adaptor (7).

Claim 3 is rejected under 35 U.S.C. 102(b) as being anticipated by Morell.

Reference is made to Figures 1 and 2 wherein Morell shows a shaft having a wall defining a hollow interior, with the shaft having a tip and butt end. A clubhead is connected to the shaft via a hosel, with the hosel having a stud (12) that is threaded to receive screw (5). Morell further depicts a shaft ring (7) within the tip end of shaft (1) along with a locking sleeve (6). The screw (5) is threadingly connected to the stud (12).

Application/Control Number: 10/709,600

Art Unit: 3711

Claims 4-10 are allowable over the prior art references of record because it would not have been obvious to modify any of the prior art devices of record to include an arrangement in which the shaft and hosel connection is further provided with a tapered locking sleeve with first and second openings, as further detailed by these claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See Figures 1 and 4 in Buhrke. Hadden ('811) shows a threaded screw disposed within a hollow shaft. See the split sleeve construction in Figure 8.

Note Figure 4 in Barron. Observe Figure 3 in Kawasaki. Hadden ('340) shows a threaded bore arrangement. See the connection in Figure 9. Tseng ('053) and Tseng ('996) show a threaded connection. See Figure 1 in Tseng ('30=98) and Figure 1 in Shin ('144).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sebastiano Passaniti whose telephone number is 571-272-4413. The examiner can normally be reached on Mon-Fri (6:30-3:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Greg Vidovich can be reached on 571-272-4415. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
